PROFESSIONAL SUMMARY

AWS-certified professional transitioning from procurement and operations into cloud and DevOps engineering, with hands-on practice designing AWS networks, provisioning compute resources, automating infrastructure with Terraform, containerizing applications with Docker, and supporting automated delivery through CI/CD pipelines. Working knowledge of Linux, Git/GitHub, IAM, monitoring, and highly available architecture. Brings 10+ years of experience managing business-critical requirements, coordinating stakeholders, troubleshooting operational issues, and maintaining accurate documentation.

CLOUD ENGINEERING CAPABILITIES

Cloud Networking: Design Amazon VPC environments with public and private subnets, route tables, Internet Gateways, NAT Gateways, security groups, and network ACLs; apply subnet association and routing principles to control connectivity.

Compute, Scaling & High Availability: Provision and configure Amazon EC2 instances; install and manage web services on Linux; distribute traffic with Application Load Balancers; configure target groups, launch templates, and Auto Scaling Groups across multiple Availability Zones.

Infrastructure as Code: Use Terraform to define, provision, modify, and destroy AWS infrastructure; organize configurations across provider, variables, outputs, networking, compute, storage, and load-balancing files; run init, validate, plan, apply, and destroy workflows.

Storage & Content Delivery: Create and secure Amazon S3 buckets; host static websites; distribute content through Amazon CloudFront; configure bucket access, static assets, outputs, and DNS integration patterns.

Identity, Security & Governance: Configure AWS IAM users, groups, roles, and policies; apply least-privilege access; use security groups and network ACLs as layered controls; understand CloudTrail logging and encryption with AWS KMS.

Monitoring & Serverless: Monitor infrastructure and application activity with Amazon CloudWatch logs, metrics, and alarms; build Amazon S3 event-driven workflows with AWS Lambda and validate execution through logging.

Linux Administration: Navigate Linux filesystems, manage files and permissions, install packages, control services with systemctl, inspect logs, configure web servers, and troubleshoot application and network connectivity.

Git & GitHub: Create and manage repositories; clone projects; stage and commit changes; work with feature branches; push and pull updates; merge changes; create pull requests; resolve basic conflicts; and maintain project documentation through README files.

Docker & Containers: Create Dockerfiles; build, tag, and manage images; run and inspect containers; map ports; configure environment variables, volumes, and container networks; push images to registries; and use Docker Compose for multi-container applications.

CI/CD & Deployment Automation: Build CI/CD workflows with GitHub Actions to trigger on code changes, check out source code, build and test applications, create Docker images, publish artifacts or images, and deploy updates; manage pipeline secrets and troubleshoot failed workflow logs.

Databases: Understand deployment patterns for Amazon RDS, DynamoDB, and ElastiCache, including private-subnet placement, security-group access, backups, availability, and managed-service selection.

SELECTED CLOUD PROJECTS

AWS S3 & CloudFront Portfolio Website

- Deployed a static portfolio website using Amazon S3 and CloudFront, with website assets organized for repeatable updates and global content delivery.
- Applied S3 access and CloudFront configuration principles and published the live portfolio as evidence of hands-on AWS work.

Terraform AWS Infrastructure Lab

- Built modular Terraform configurations for AWS networking and application infrastructure, including VPC, subnets, routing, security groups, EC2, target groups, load balancing, and outputs.
- Used Terraform plan and apply workflows to provision infrastructure, validate changes, rebuild environments, and safely remove lab resources when practice sessions ended.

Serverless File-Upload Logging

- Configured an event-driven workflow in which Amazon S3 object uploads invoke AWS Lambda and generate operational logs in Amazon CloudWatch.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate
Amazon Web Services

AWS Certified Cloud Practitioner
Amazon Web Services | Valid 2026-2029

PROFESSIONAL EXPERIENCE

Procurement Specialist (MRO) | Arabian Pipeline & Services Co. Ltd. (ANABEEB) Nov 2025-Present

Jubail, Saudi Arabia

- Manage concurrent, business-critical requirements for MRO materials, spare parts, equipment rentals, and maintenance services from RFQ through purchase order and delivery.
- Coordinate suppliers, engineering, quality, finance, and operations teams; resolve delivery, specification, and material-quality issues through structured follow-up and documentation.

Procurement Officer | Exa Alfamar Aug 2025-Nov 2025

Riyadh, Saudi Arabia

- Managed RFQs, bid evaluations, purchase orders, technical approvals, vendor onboarding, service entry sheets, and international purchasing requirements.
- Reduced ceramic raw-material cost by 12% through supplier sourcing and supported machinery procurement that increased production capacity by 15%.

Procurement Officer | Bostani Company 2018-2025

Dammam, Saudi Arabia

- Managed local and international sourcing, demand planning, supplier negotiations, purchase orders, logistics, regulatory registrations, and payment coordination.
- Reduced procurement costs by 10% through international sourcing and transportation costs by 18% by expanding logistics options.

Logistics & Operations Officer | Bostani Company 2013-2018

Dammam, Saudi Arabia

- Coordinated nationwide deliveries, shipment tracking, freight forwarders, stock availability, returns, claims, and logistics reporting.
- Managed product-registration processes through SABER, SFDA, and FASAH and negotiated shipping arrangements with logistics providers.

EDUCATION

Bachelor of Business Administration | University of Baguio | 2009-2013

ADDITIONAL CERTIFICATIONS & TRAINING

- Certified International Procurement Professional and Manager (CIPP & CIPM) - IPSCMI | 2025-2030
- Project Management Professional Training - Technical and Vocational Training Organization | 2024-2029
